

Why LG Cloud Devices?

## Powerful and Secure Cloud Computing

**THE RIGHT CLOUD SOLUTION.** LG Cloud Solutions include Mobile, All-In-One, Desktop Thin Client devices and Zero Client solutions with Teradici PCoIP® processors designed to deliver secure and efficient cloud computing. IGEL2 and Stratodesk OS provide exceptional protection from ransomware attacks. Productive workspaces that support Microsoft® Teams, Zoom®, and other unified communications. Google® ChromeOS Flex provides a cloud-first, fast, easy-to-manage, and secure OS that enables organizations to optimize their endpoints with a more modern computing experience. LG cloud devices offer a game-changing opportunity for businesses operating contact centers or employing remote workers where rapid deployment and management are required.

### Benefits of Cloud Devices

Eco-friendly lowers power consumption and carbon emissions

Safely store data in the cloud while providing access to devices regardless of location

Cloud environment dramatically reduce Total Cost of Ownership (TCO)

Work Efficiency and manage software and security updates

# LG Cloud Device

All-in-One, Mobile, and Desktop Thin Client Devices

**ENHANCED ENDPOINT SECURITY.** The proliferation of individual employee devices can increase the risk of security problems. An LG Cloud network allows data to be safely stored in the cloud while providing access to the data on cloud devices regardless of location. The secure operating system functions as read-only to provide exceptional protection from ransomware attacks and viruses, as only what is installed will run on the system. Because the OS runs in memory, any changes are removed on reboot.

**ELEVATE THE USER EXPERIENCE.** LG Cloud devices work within a Virtual Desktop Infrastructure (VDI) that optimizes unified communication solutions to allow employees to collaborate and move more freely within your workplace or any outside location. On-board collaboration tools further streamline this process. This seamless, intuitive digital environment can enhance productivity across the entire enterprise.

**TCO SAVINGS.** An LG Cloud network runs Windows® in a virtual environment rather than hundreds of individual endpoints. LG's OS partners free you from the added costs of agent fees, anti-virus software, and encryption. In addition, higher-spec PCs require more power to operate. Switching to a LG Cloud environment can dramatically reduce the Total Cost of Ownership (TCO).

**IMPROVED OPERATIONAL EFFICIENCIES.** The ultra-simple user interface single endpoint solution makes network management a breeze. LG Cloud Solution devices are intuitive and easy to operate, in fact, a single administrator can manage thousands of endpoints remotely.
